EM = Emerging Markets

This graph shows credit default swap spreads, as measured by 5 year spreads on USD denominated sovereign debt.

Listed CDS spread is the premium paid by the buyer to the seller of the CDS. This varies from conventional understanding of yield spreads i.e. over US treasury yield.

What's important to note in this graph is that the market has priced South African 5Y USD denominated debt at a level considered more risky than both Turkey and Russia (both junk at S&P; Russia junk at Moody's).

Note:

The default event typically used for EM debt is CR (Credit Restructuring) which triggers an event when a debt obligation is restructured – i.e. interest payments reduced; principal reduced; maturity extended; becoming subordinated to another obligation or having its currency changed.

With Tito Mboweni's appointment as Finance Minister on the 9<sup>th</sup> of October, South Africa has the unenviable track record of having had 5 Finance Ministers in the last three years.

This chart picks out the date of appointment of each successive Finance Minister together with the rand-dollar exchange rate at the time of appointment going back to the appointment of Chris Liebenberg by Nelson Mandela's Government of National Unity.

All charts are in base currency terms unless otherwise indicated. All charts are sourced from Thomson Reuters. This version of Chart Book was updated on the date indicated below. However, as data series can have differing reporting frequencies (e.g. daily v monthly) each chart may have a slightly different end point. End points may not necessarily coincide with the date below.

A dark, moody photograph of people walking on a wet, reflective surface. The silhouettes of their legs and feet are visible, and their reflections are clearly seen in the water. A large, white, semi-transparent arrow points from the left towards the right, centered in the image. The overall atmosphere is somber and reflective.

THANK YOU
